617-723-2277 ext. 217*

Implications of the National Mathematics Advisory Panel

Monday, June 16, 2008

Pioneer recognizes that today Mathematics and Science are the currency of economic success. Few would dispute this, nor would many dispute that Math and Science education in the United States lags behind much of the first and even developing worlds. However, even fewer have proposed detailed agendas to address the issue.

Please join us as we discuss the recent findings of the National Mathematics Advisory Panel Report with a keynote from panel member Wilfried Schmid and the presentation of a policy brief by panel member Sandra Stotsky, who will outline recommendations for improving Mathematics and Science instruction in Massachusetts' schools.
